An Elegant designation
A noble Pattern

Jam Tile Corporation was put into operation in 2001. This organization started the area of its activity with producing floor tiles and has always endeavored to manufacture products with higher quality and also more diversity from the very beginning.

Jam Tile is fully capable of producing tiles in dimensions of 33*33, 20*20, 40*40 and has recently succeeded in producing 60*60 tiles, benefiting from the modern technology of digital printing and cutting mechanism as well and yet considering an outlook of producing tiles in dimensions of 120*60 by utilizing the Nano Coating technology forthcoming. With the aim of enhancing the quality of the products, Jam Tile Has started producing brand new products in cooperation with Spanish enterprise "Vidres", and has begun a new chapter in defining the quality and attraction of the products inspired by the beautiful and authentic designs of this company.

Today Jam company is one of the major manufacturers with the highest standards in tile industry, recruiting the most up to date technology in the world and skillful experts that will be constantly striving for maintaining innovation.

Production Process

Tile production is accomplished in different phases at Jam tile plant facility. The QC unit has a vital role and monitors each and every stage of the production program all over.

Tile production begins at the stone crusher unit. At this stage used stones are crushed and prepared for the whole production process. Afterwards prepped powders are transferred to the grout making unit in order for providing the primary mortar for making the tiles. At dryer pressing spray unit, the made grout is placed under air pressure and then gets dried and solidified by a particular method.

Accordingly the primary and the raw mold of the product is prepared, yet the production process is halfway through because it takes much longer to attain an acceptable product. Following this stage, the well formed tiles are transferred to moisture evaporating or "Dryer" unit for dropping their internal dampness. The glaze of a tile and ceramic is sort of a cover which is placed on the surface of a tile or a ceramic. glazes are typically come in coarse grained powder, either colored or black and white which are get mixed with water after grinding and turn into the state of grout and placed on the surface of the ceramics and tiles like a thin layer using many different methods and then transferred into the furnace for heating under different temperatures depending on the material and considerable output. Packaging of the tiles and ceramics has an essential significance and during the packaging and sorting process the most possible and extreme accuracy is applied. With possessing unparalleled standards, the QC unit applies a comprehensive and precise monitoring on the terms, packages grades and the proper quantity of the tiles in every single packages.

Tiles and ceramics are a kind of materials. It is a building made of soil. It is made of finely milled clay, it becomes and becomes a form. It is glazed and then heated. It is cooked on top. These tiles, due to durability, water resistance and the attractiveness of beauty, usually for covering the floor, walls and tables are used.

Nature, technology, science and design.

Top quality ceramic surfaces by **JAM Tiles** are compact and impermeable, because they're made from pure minerals pressed and sintered at more than 1200°C. The best choice, for durability, safety, hygiene and beauty.

Features and uses of ceramic tiles:

***Durability:** Ceramic tiles have a long shelf life
And they are resistant to wear and for high traffic areas are suitable

***Water resistance:** Glazed ceramic tiles in
They are impermeable to water and for
bathrooms, kitchens and others Moisture prone
areas are ideal

***Beautiful variety:** in a wide variety of colors,
patterns ,Sizes and finishes available

***Ease of maintenance:** clean ceramic tiles and
They are relatively easy to maintain

***Temperature resistance:** they can withstand high
temperatures ,Tolerate and for the areas near the
stove and Fireplaces are suitable

The image shows a large industrial facility, likely a tile manufacturing plant. In the foreground, there is a large circular concrete basin filled with a thick, greyish-brown slurry. A vertical pipe or agitator extends into the slurry. In the background, there are several large, horizontal cylindrical tanks or silos, some with yellow and white stripes. Above these tanks, there are multiple levels of metal walkways and scaffolding with railings. The overall scene is industrial and somewhat dimly lit, with a focus on the raw material preparation stage.
